                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 177, Application US/09665615B

Sequence 177, Application US/09665615B

Patent No. 6653133

GENERAL INFORMATION:

APPLICANT: Dean, Nicholas M.

APPLICANT: Marcusson, Eric G.

APPLICANT: Watt, Jacqueline

TITLE OF INVENTION: Antisense Modulation of Fas Mediated Signaling

FILE REFERENCE: ISPH-0502

CURRENT APPLICATION NUMBER: US/09/665,615B

CURRENT PILING DATE: 1999-04-12

PRIOR APPLICATION NUMBER: US 09/290,640

PRIOR APPLICATION NUMBER: US 09/290,640

PRIOR APPLICATION NUMBER: US 09/290,640

SEQ ID NOS: 179

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US-09-422-978-8771

US-09-422-978-8771

Sequence 8771.

Patent No. 6537751

GENERAL INFORMATION:

APPLICANT: Cohen, Daniel

APPLICANT: Chumakov, Ilya

ITLE OF INVENTION: Biallelic markers for use in constructing a high density...

FILE REFERENCE: GENERT 020CP1

CURRENT APPLICATION NUMBER: US/09/422,978

CURRENT FILING DATE: 1999-10-20

EARLIER FILING DATE: 1999-04-21

EARLIER PILING DATE: 1999-11-23

EARLIER FILING DATE: 1998-04-21

Sequence 27, Application US/09665615B

Patent No. 6653133

GENERAL INFORMATION:

APPLICANT: Dean. Nicholas M.

APPLICANT: Wyatt, Jacqueline

TITLE OF INVENTION: Antisense Modulation of Fas Mediated Signaling

FILE REFERENCE: ISPH-0502

CURRENT APPLICATION NUMBER: US/09/665,615B

CURRENT FILING DATE: 1999-04-12

PRIOR PILING DATE: 1999-04-12

NUMBER OF SEQ ID NOS: 179

SEQ ID NO 27

LENGTH: 20

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 1078, Application US/0968564B

Patent No. 681847

GENERAL INFORMATION:

APPLICANT: Pavco, Pam

APPLICANT: Pavco, Pam

APPLICANT: Stinchcomb, Dan

TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Recptor

TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Recptor

TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Recptor

CURRENT FILING DATE: 1995-10-26

PRIOR FILING DATE: 1995-01-08

PRIOR PLING DATE: 1996-01-08

PRIOR PLING DATE: 1996-01-08

PRIOR FILING DATE: 1999-08-10

PRIOR FILING DATE: 1999-08-10

PRIOR FILING DATE: 1999-08-10

PRIOR FILING DATE: 1999-08-10

SEQ ID NOS: 8231

SEQ ID NO 1078

LEMERT PLANCE DATE: PATENTION VARIENCE DATE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 33, Application US/09696791

Patent No. 6770633

GENERAL INFORMATION:
APPLICANT: Tritz, Richard
TITLE OF INVENTION: RINDSTME THERAPY FOR THE TREATMENT OF PROLIFERATIVE
TITLE OF INVENTION: RINDSTME THERAPY FOR THE TREATMENT OF PROLIFERATIVE
FILE REFERENCE: 480124.407
CURRENT APPLICATION NUMBER: US/09/696,791
CURRENT APPLICATION NUMBER: 2000-10-25
NUMBER OF SEQ ID NOS: 4523
SOFTWARE: PATENTIN Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ..

Patent No. 6380369

GENERAL INFORMATION:
APPLICANT: Adams et al.
TITLE OF INVENTION: Human DNA Mismatch Repair Proteins
FILE REPRENCE: PF106P2
CURRENT FILING DATE: 1994-08-23

PRIOR FILING DATE: 1994-08-16

PRIOR PRICING DATE: 1994-01-16

PRIOR PLING DATE: 1994-01-27

NUMBER OF SEQ ID NOS: 78

SOFTWARE: PatentIn version 3.0

SEQ ID NO 11

LENGTH: 18

US-09-535-012A-10
Sequence 10, Application US/09535012A
Sequence 10, Application US/09535012A
Sequence 10. 6531281
GENERAL INFORMATION:
TITLE OF INVENTION: Method of Detecting Sulphate- Reducing Bacteria
FILE REFERENCE: 111628-00114
FILE REFERENCE: 1000-03-24
CURRENT PALICATION NUMBER: 08/09/535,012A
CURRENT FILING DATE: 2000-03-24

PRIOR PILING DATE: 1999-03-24
